**DESCRIPTION OF WORK**

Service Oldsmar- Eduardo for Diag: customer informed tech of startup issues during a recent outage, noting a fault for rpm loss. Generator is able to startup manually and produce good voltage, receiving proper 12vdc to the starter. Testing indicates the starter motor is intermittent failing. Recommend a replacing the starter motor and connecting contact + maintenance. Inspected the radiator, noting that while intact, signs of wear and tear are present. Customer would like to hold off any radiator repairs at this time. Generator set to auto and ready to run. Office has cc info. Tech will compile parts list to quote.
